

Programming- Year Six

Vocabulary	Word Definition
Variables	Something that is 'changeable'
Sensing	Sensing blocks is one of the ten categories of Scratch blocks. They are color-coded cyan, and are used to detect different factors of a project.
Algorithm	A set of guidelines that describes how to perform a task. Think of an algorithm as step-by-step instructions.
Sequence	The particular order in which things follow each other.
Debug	To identify and remove errors from computer software.

Questions

1. What are 'variables' on Scratch?
2. How can you improve a game on scratch?
3. Give an example of when you have had to 'debug' in computing?
4. Can you give an example of when you have had to 'debug' in Maths?
